PLANIKA FIRES

"Diseños para vivir y ser vividos"

INDEX

ourstory

It started with a simple bonfire in the heart of the Australian continent, under the red Ayers Rock. Two tourists, Alfred Weilandt and Jerry Dabrowski were sitting by the fire, long into the night, listening to Aboriginal tales about a mythical Epoch of Dreams. The atmosphere created by the flames inspired the two to find an easy way to have the same fire in contemporary interiors.

They intended to overcome the existing difficulties in the form of soot, ash and the need for a chimney, all of which are associated with fire in an interior space. Contemporary lifestyle demands products that through design have a character of their own but are safe and easy to use. After months spent on designing and testing, they came up with a product combining the beauty of form and the comfort of use thanks to bioethanol fuel. But most of all a product that satisfies the atavistic need to commune with fire.

designfire

We took on the challenging task and went beyond all the established boundaries to design fire like never before. Our endeavours lead us to develop solutions that allow us to arrange a natural fire in any space; be it indoor or outdoor.

As a world leader in fully automatic fireplaces, we guarantee the convenience and safety of our products. We listen to our clients carefully to provide individually customized products. Our offer covers net zero bioethanol fireplaces with patented BEV® Technology and gas fire solutions that provide a lot of freedom in designing your perfect space with fire as the focal point.

The recognition says it all. Planika is global. With an extensive distribution network, we are present in over 100 countries around the world. But the success also lies in the concept of a teal organization that Planika adopted. In our company, there is no hierarchy. All the employees are given freedom in managing their working schedule and have a real influence in the process of product creation.

*~This made it possible to give you truly unique solutions in fire design.*

Planika

BEV® TECHNOLOGY

GAME-CHANGING INNOVATION IN FIREPLACE INDUSTRY

The BEV® technology is the most advanced technology on the fireplace market and it has revolutionized the industry. It is now possible to have a line of fire in a media wall under TV, in an apartment on a higher floor, arranged as a room divider or even on a yacht. For years now, this innovative solution has been taking projects with real fire to the next level. You can use fireplaces with the BEV® technology anywhere you want, without any limitations. It is manufactured according to UL standards and is O-TL certified, meeting the most demanding safety and quality requirements.
PLANIKA AUTOMATIC FIRE
- Without chimney
- No smell, no soot, no ash
- No contact between fuel and fire
- Controlled by mobile app or a remote
- Automatic refuelling
- Safety sensors
- Real fire
- Easy installation

HOW DOES THE BEV® TECHNOLOGY WORK?

The entire burning process is fully automated. The fireplace takes only the required amount of fuel from the tank and the pump transports it to the combustion chamber. The bioethanol is vapourised and distributed along the entire length of the burner where it is then combusted. The fire does not come in any direct contact with the liquid fuel. Thanks to the isolated fuel tank, the cooling fans and the combustion chamber, the temperature of the ethanol fuel is always low and safe.

The microprocessor communicates with many sensors inside the fireplace and controls its entire operation. The fireplace informs you of any actions with a sound signal and a message in the mobile app. The convenient remote control of the fireplace eliminates any risk of human error.

NET ZERO®

CARBON NEUTRAL SOLUTION FOR PREMIUM DESIGN

Planika's mission is to create safe fireplaces that leave little to no impact on the environment. Our automatic fireplaces with the BEV® technology are fuelled with bioethanol - organic eco-fuel. This allows to use our products where traditional fireplaces are prohibited by the environmental restrictions. Planika has developed the cutting-edge solution - the true CO_2 - neutral fireplaces of the future.

WHAT IS FANOLA FUEL?

- ✓ 96% ethanol concentration
- ✓ odourless and clean combustion
- ✓ plant-origin distillate
- ✓ particulate-free
- ✓ multi-distillated
- ✓ pharmaceutical quality
- ✓ natural, golden flame

HOW ARE PLANIKA'S BEV® FIREPLACES CO_2 NEURAL?
Planika's fireplaces utilize multi-rectified bioethanol which is made from plants, such as wheat, corn or potatoes. The BEV® Technology turns liquid fuel into ethanol vapours to provide the safest combustion process and the most natural fire. The clean burning of ethanol vapours emits only a small amount of CO_2 – similar to that exhaled by a human. No ash, soot, or smoke are produced. 100% of the emissions are absorbed by the same plants that are used to produce the biofuel. This way the carbon emission process comes full circle.
